## Exam Question Examples and Expectations

Now, what does all this mean in real life? Let's talk about some *actual* things you might see on the exam, or even in a job interview. These aren't the actual questions, just examples. For instance,

imagine seeing something like this:

### Example 1 (Deployment Focused):

- "You need to configure a new VLAN on a Dell SONiC switch. Describe the steps you would take, including the necessary commands." This is a classic "know-your-stuff" question. It's not just about giving the commands; it's about explaining the process in a way that shows you understand what's happening at each stage.
- How can you verify the BGP peering status on the Sonic switch? This type of question checks not just you know how to configure the basics but also your trouble shooting skills.

### Example 2 (Conceptual):

- "Explain the benefits of using a disaggregated network operating system like Dell SONiC compared to a traditional monolithic one." This question is all about showing your understanding of the bigger picture – why SONiC exists and what problems it solves.
- What are some of the common challenges faced when deploying SONiC in a production network? This kind of question asks you to move beyond the theory and demonstrate an understanding of real-world complexities.

### Example 3 (Troubleshooting):

- "You've configured a new interface on your SONiC switch, but it's not working. What are the first three things you would check?" This tests your ability to think on your feet and apply your knowledge in practical scenarios.

These aren't meant to scare you. They're meant to give you an idea of what's expected. They also show that the exam doesn't just want you to know facts. It also wants you to be able to apply them, like actually using your hands.
